CE Credits:

Establishing a safe and healthful working environment requires every employer – large and small – and every worker to make safety and health a top priority. The entire work force – from the CEO to the most recent hire – must recognize that worker safety and health is central to the mission and key to the profitability of the American company.

As leadership, workers and employers take that responsibility seriously, they focus on reducing injuries, illnesses, and fatalities through their increased commitment to improved safety and health. It's good business sense for employers to protect workers from injury and illness on the job as accidents and injuries are expensive and costs mount up quickly. Substantial savings in workers' compensation and lost workdays are possible when injuries and illnesses decline.

Each safety and health program should be tailored to fit the company, to blend with its unique operations and culture, and to help employers maintain a system that continually addresses workplace hazards. There are five elements that every effective program should have:

- Management, leadership and employee participation
- Workplace analysis
- Hazard prevention and control
- Safety and health training and education
- Program evaluation

Who Should Take This Course: Personnel responsible for health and safety; Human Resource representatives; Safety Committee Team Members.

Course Objectives:

- Recognize and use key safety and health terminology, as well as team safety concepts and techniques
- Become a more effective safety team, or plan for and create an effective safety team
- Identify training and development needs of team members
